## SIMPLE, INVISIBLE, EFFECTIVE: TROX WALL DIFFUSERS CHM AND CHS

The elegant solution for every application: The new CHM and CHS wall diffusers from TROX can be perfectly integrated into the room thanks to their discreet appearance. They can be used in a variety of ways - whether for supply air, extract air or a combination of supply and extract air: the integrated sound insulation of the wall elements effectively reduces sound transmission via the duct system or through the wall.

The CHM and CHS types complement and complete TROX's portfolio of wall diffusers. Together with the well-established types of slot diffusers for ceiling installation, variable packages can thus be individually assembled for almost any application: Elegant and inconspicuous air diffusers with excellent technical properties.

In new buildings and renovations which focus on the technical refurbishing and therefore the installation of suspended ceilings in hallways, the wall diffusers CHM and CHS from TROX offer technical as well as visually attractive solutions.

All advantages at a glance

- > Aesthetic wall installation without suspended ceilings
- > Integrated sound insulation to prevent cross-talk sound transmission
- > Adjustable air control elements for clean airflow in the room
- > Easy and quick installation - no tools required to fix the front rail
- > Variable designs and colours available
- > Optional volume flow limiter accessible from the room side (for type CHM)
- > Supply air, extract air and supply/extract air combination available
